R350.20

EN: **1.4307**
Type: **304 L**
Werkst. Nr: **1.4307**

R350.20 is an austenitic stainless steel grade. Its austenitic structure, low Carbon content and relatively high Nickel content makes the grade very usefull where there are high demands regarding forming properties. Besides this, the grade has good corrosion resistance and good weldability and is therefore very useful for general applications. This grade is non magnetic in annealed condition but will be a bit magnetic in a cold worked condition since a part of the austenite will be transformed into deformation martensite.
